In combination with the IUGG 2023 conference in Berlin we offer a scientific training course on how to access and use ocean bottom and amphibian pool data, how to apply novel processing techniques, and about the „underwater potentials“ in modern broadband seismology. The course is organized by the scientific advisory board of the German Instrument Pool for Amphibian Seismology (DEPAS, awi.de/depas).

**Lectures** (agreed)

- **W. Geissler** (Alfred Wegener Institute)
- **W. Crawford** (National Centre for Scientific Research, Institut de physique du globe de Paris)
- **M. Tsekhmistrenko** (University College London)
- **K. Hannemann** (University of Münster)
- **N. Harmon** (Woods Hole Oceanographic Institution)
- **R. Cabieces Diaz** (Spanish Naval Observatory)
- **S. Heimann** (University of Potsdam)
- **Z. Zali** (University of Potsdam)
- **F. Krüger** (University of Potsdam)

The training course is suited for early career scientists interested to get in touch with new and quickly developing research fields in seismology.

To register for the training course, please send a short e-mail including your motivation and CV to frank.krueger@uni-potsdam.de

**Deadline for registration: June 1, 2023**

**Maximum participants: 20**

No course registration fee. Registration for IUGG conference is also not necessary.
